

Quick Start Guide

This is a condensed setup guide to get the game running as fast as possible.

5-Minute Setup

1. Install Unity (if not installed)

- Download [Unity Hub](https://unity.com/download) (<https://unity.com/download>)
- Install Unity **2022.3 LTS** with **Windows Build Support**

2. Create Project

- Unity Hub → New Project → **2D (Built-in Render Pipeline)**
- Name: SpaceShooter
- Create project

3. Copy Scripts

- Copy all `.cs` files from `Assets/Scripts/` to your Unity project's `Assets/Scripts/`

4. Add Tags

In Unity: **Edit** → **Project Settings** → **Tags and Layers** → **Tags**

Add these tags:

- Player
- Enemy
- Bullet
- PowerUp

5. Auto-Setup

1. In Unity: **GameObject** → **Create Empty**
2. Name it `GameSetup`
3. Add Component → **GameSetup** script
4. Press **Play**
5. Game auto-configures!

6. Build for Windows

1. **File** → **Build Settings**
2. Platform: **Windows, Mac, Linux**
3. Click **Add Open Scenes**
4. Click **Build**
5. Select output folder
6. Done! Run the `.exe` file

Controls

- **WASD/Arrows**: Move
- **Space**: Shoot

- **Enter**: Start game
- **Escape**: Pause
- **R**: Restart (after game over)

That's it!

Enjoy your space shooter game!
