

Setup Guide (Windows Desktop)

This project targets **Unity 2022.3 LTS** and **Windows x86_64** desktop builds.

Quick Start

1. Open Unity Hub.
2. Add this repository as a project.
3. Open with Unity 2022.3 LTS.
4. Create/verify scenes:
 - Assets/Scenes/MainMenu.unity
 - Assets/Scenes/Game.unity
5. Add both scenes to Build Settings.
6. Build target: PC, Mac & Linux Standalone → Windows → x86_64 .

Required Scene Objects

- GameManager (with GameManager script and pool refs)
- ScoreManager
- WaveManager
- EnemySpawner
- AudioManager (2 audio sources)
- Player
- UI Canvas (health, score/combo, wave, pause, game over)
- ObjectPool objects for player bullets, enemy bullets, enemy types, powerups

Legacy Input Used

- Horizontal/Vertical axes
- Fire1
- Space
- Escape

Build Executable

1. File → Build Settings
2. Select Windows , x86_64
3. Click **Build**
4. Run generated .exe
